## PremiDoor Lift and Slide

### ► Bringing in more light

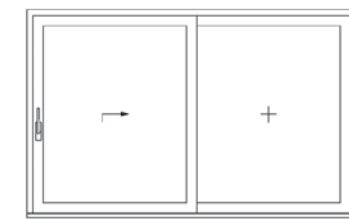

**There's no better door on the market than Kömmerling's lift and slide PremiDoor, which maximises the use of glass. It also offers an incredible smooth and quiet opening mechanism that's been designed with typical German engineering and efficiency.**

PremiDoor is capable of some incredible opening sizes and is perfect for any rear elevation or terrace. It also offers outstanding thermal, acoustic and weathering properties and is better for the environment, thanks to the use of the 'Greenline' lead-free PVCu compound.

### ► Designed for any opening

Whatever your property or even commercial project, there's a PremiDoor option to suit the most exacting of requirements, thanks to 2, 3 or even 4 pane opening

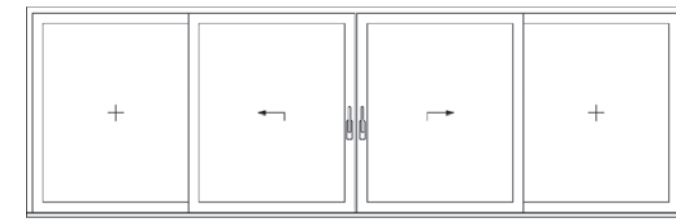

options with both fixed and opening sashes. The diagrams below show just a few of the options.

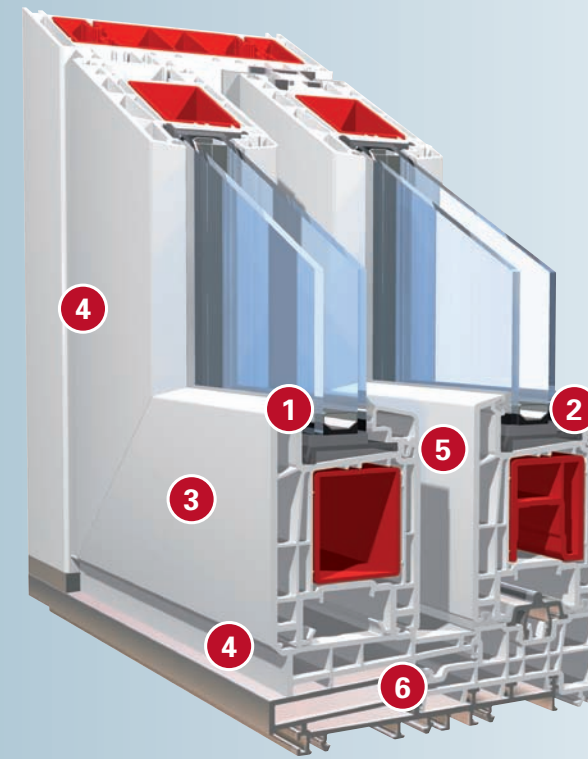

Double pane option with moving left hand and fixed right hand sash.

3 pane option with moving left and right hand sash, along with fixed middle sash.

4 pane option with moving centre sashes and fixed left hand and right hand sashes.

- 1 Low line gaskets and weatherseals provide lasting performance and slimmer sightlines.
- 2 Single leg glazing bead is highly secure and easy to install on sight.
- 3 Reliable functionality, great handling and smooth and quiet running of the sliding sashes.
- 4 Extraordinary measurements: sash sizes up to 3.0m wide and 2.5m high. Up to 4 sashes.
- 5 All PVCu profiles are extruded in our exclusive lead-free Greenline compound.
- 6 Outstanding thermal insulation threshold with thermal break for optimal isothermal properties.

### ► Innovation and Energy Efficiency

Like all of our window and door systems, the lift and slide PremiDoor is packed full of features. It's designed to let in more light in large openings than a typical bi-folding door and makes for an impressive entrance. It's also been proven across Europe to withstand the harshest climatic conditions.

Kömmerling and parent company, profine Group, also lead the way across Europe with their lead-free Greenline compound that was developed 7 years ago. In the UK many Systems Companies still use lead as a stabiliser in their PVCu compound. At profine, we understand the importance of the environment in terms of harmful materials and energy efficiency.
